

For the Love of Databases and Basketball

Morgan Stippa
Marist College

Executive Summary

This database was designed to help agents, coaches, and general managers have an in depth look at players' statistics so they know who'll go well on their team. The users will be able to see a player's stats per quarter, per game, and their career stats, among many other advanced statistics. It's important for scouting agents to be able to be able to breakdown every part of a player's game and this database helps with that.

Entity-Relationship Diagram

Tables

Players contains the pid,name, birthdate, height and weight of the basketball players

```
CREATE TABLE players (  
  pid character(4) NOT NULL,  
  firstname text,  
  lastname text,  
  dateofbirth date,  
  heightinches numeric(3,1),  
  weightlbs numeric(4,1),  
  CONSTRAINT players_pkey PRIMARY KEY (pid)  
);
```

functional dependencies

pid -> firstname, lastname, dateofbirth, heightinches, weightlbs

	pid character(4)	firstname text	lastname text	dateofbirth date	heightinches numeric(3,1)	weightlbs numeric(4,1)
1	p001	Tim	Duncan	1976-04-25	83.0	250.0
2	p002	Alan	Labouseur	1912-12-25	95.0	300.0
3	p003	Chris	Kaman	1982-04-28	84.0	265.0
4	p004	Stephen	Curry	1988-03-14	75.0	190.0
5	p005	Giannis	Antetokounmpo	1994-12-06	83.0	222.0
6	p006	Matt	Bonner	1980-04-05	82.0	235.0
7	p007	Boban	Marjanovic	1988-08-15	87.0	290.0
8	p008	Lebron	James	1984-12-30	80.0	250.0
9	p009		Nene	1982-09-13	83.0	250.0
10	p010	Kristaps	Porzingis	1995-08-02	87.0	240.0

TeamsPlayers lists the teams and their players as well as their position(s)

create table teamsPlayers (

tid char(4) not null references teams(tid),

pid char(4) not null references players(pid),

season integer not null,

position text not null,

primary key (tid,pid,season,position)

);

functional dependencies

(tid,pid,season,position)->

	tid character(4)	pid character(4)	season integer	playerposition text
1	t001	p001	1996	forward

4	Stephen	Curry	35.6
5	Tim	Duncan	37.0
6		Nene	31.5

setNull_fg1 sets the field goals attempted in quarter to null if user tries to enter 0. This procedure could also be used for three pointers attempted and free throws attempted in all quarters

create or replace function setNull_fg1()

returns trigger

as \$\$

begin

if (new.fga1 = 0) then

update playerstatsfirstquarter

set fga1=null;

end if;

end;

\$\$ language plpgsql;

Triggers

shotsAttempted calls upon the **setNull_fgq1()** stored procedure when user inserts a value to **fgq1** in the **playerstatsfirstquarter** table

```
create trigger ShotsAttempted
before insert on playerstatsfirstquarter
for each row
execute procedure setNull_fgq1();
```

Before Update:

35	p010	g002	13	8.0	4	5
36	p010	g005	6	7.0	0	2
37	p010	g006	6	8.0	2	2

After Update:

35	p010	g002	10	8.0	4	4
36	p010	g005	10	5.0	0	2
37	p010	g006	12	6.0	2	2
38	p011	g001	12	6.0	6	

Security

Admin will be able to perform insert, update, alter, and delete functions on the database

```
Create role admin
Grant insert, select, update, alter, delete
On all tables
In schema public
To admin;
```

User can perform queries on the database but cannot change the database

```
Create role user
Grant select
On all tables
In schema public
To user;
```

Implementation Notes – Known Problems

I went through a couple of designs before I got to the final implementation. I originally started included statistics per game and career statistics tables but it made much more sense to come up with those statistics using queries. Inserting values into the fga, threepa, fta columns was difficult because inputting a 0 caused a dividing-by-zero issue and putting in null made it seem like the data was unavailable. I ended up removing all nulls and all 0, which made the statistics not as accurate but it allowed me to calculate field goal percentage.

Future Enhancements

Including a table that has data on a player's past and current salary among other things would make this database a lot more useful for agents scouting for players. Including more tables that hold even more in depth statistics like statistics per possession would certainly enhance this database.
